**Code — Existing executable source**

To avoid two diverging application copies, the actual code remains at the repository root. This folder is a direct module index satisfying the academic folder structure.

| Domain | Source |
|---|---|
| PDF and cleaning | core/ingestion (../core/ingestion) |
| Structural chunking | core/chunking (../core/chunking) |
| Sentence embeddings | core/embeddings (../core/embeddings) |
| ChromaDB | core/vector_store (../core/vector_store) |
| Retrieval | core/retrieval (../core/retrieval) |
| Prompt and citations | core/rag (../core/rag) |
| Gemini and MockLLM | core/llm (../core/llm) |
| SWC/Port/Interface | core/extraction (../core/extraction) |
| Evaluation | core/evaluation (../core/evaluation) |
| Coordinator and API | backend (../backend) |
| Streamlit | frontend (../frontend) |
| SQLite | storage (../storage) |
| Settings | config/settings.py (../config/settings.py) |
| Tests | tests (../tests) |
| Dependencies | requirements.txt (../requirements.txt) |

Use the repository root as working directory when installing, testing and starting the application. This is a code index, not a separately copied source tree.
