Input Data / Knowledge Base

Actual checked-in sample

• Synthetic braking-system HLD PDF
(../data/samples/AUTOSAR_HLD_Sample_BrakingSystem.pdf)

• Golden evaluation question set — 10 items (../data/golden_dataset.json)

The braking-system sample is educational test data, not an official AUTOSAR release. The separate synthetic Door Control HLD used in prior manual testing is not currently present in this repository; add only with explicit rights to publish.

Data flow: text-PDF extraction → clean/section chunks → sentence embeddings → ChromaDB; separately, SWC/Port/Interface parsing → SQLite. A freshly cloned repository regenerates indexes through ingestion; local indexes and private OEM data are not inputs committed to Git.

Data governance: verify licensing and ownership for external datasets; never publish confidential supplier/OEM HLDs or credential-bearing logs. Scanned image-only PDFs require OCR not guaranteed by this MVP.
